Special Selections and New Items for 1950

BEANS, Topcrop. A new, round-podded green Bean. Pods are nearly 6 inches long, straight, and entirely stringless. The yield is amazing. Market growers will welcome this new sort. See next page.

CABBAGE, Wisconsin Copenhagen. Resistant to "Yellows-Disease." Bred to satisfy store keepers' demand for smaller heads. Matures a week later than our Golden Acre Disease-Resistant. Plants compact; heads solid. Listed on page 6.

CARROT, Airliner. Excellent for bunching. The roots have a brilliant orange color; length about 8 inches. Tops are short. Also known as Short Top Emperor. See page 8.

CARROT, Emperor, Long Type. The roots of this new strain attain a length of 10 inches when fully grown. Tops are strong and large. When planted in loose soil it is an ideal bunch Carrot. Listed on page 8.

CELERY, Utah Pascal. Largest of the Pascal varieties. Grows tall and erect. Dark green, long jointed, with full hearts. Our strain is highly resistant to "blight." See page 9.

CUCUMBER, Burpee Hybrid. The fruits are 8 inches long and $2\frac{1}{4}$ inches in diameter. Color dull green. Stands the hot weather well and can be picked every few days throughout the summer. Refer to page 11.

ONION, Yellow Valencia. The best Spanish-type Onion. None better for upland. Our strain is selected for extra size and uniformity. Bulbs are straw-colored, mild and sweet. See page 15.

ONION, Downing's Yellow Globe. Undoubtedly the best keeping Onion. The dark bronze skins are folded tightly around the bulb, thus reducing the amount of "peeling" when sorted and bagged by machine. Recommended for muck soil. Page 15.

ONION, White Bunch. The true French strain is the most desirable for growing mild, tender Bunch Onions. For best results well-fertilized land should be used. Our stock is supreme. See page 15.

PEPPER, Roumanian Wax. Popular on the eastern markets. Fruits are 4 to 5 inches long and tapering to a point. Color lemon-yellow, turning red when ripe. Medium hot, a good yielder and early. See page 17.

SQUASH, Butternut. A new Squash from the New England States. Fruits about 10 inches long and 5 inches in diameter at blossom end. The necks are 3 to 4 inches in diameter, straight and all solid meat. Average weight 3 to 4 pounds each. It ripens early and produces a large number of fruits. Listed on page 20.

TOMATO, Southland. This new Tomato was bred by the South Carolina Experiment Station, assisted by other Southern States. Heat, drought and wilt resisting. It resembles our Rutgers Tomato in size, color and maturity but yields more fruits. See page 20.

The Finest of Stock Seeds are Used in the Production of Our Cabbage Seeds

CAULIFLOWER

In judging Cauliflower we use the following standards as being essential: Short, strong stem; broad outer leaves; inner leaves folded well over the heart for self protection; good weight and depth of head at maturity; resistance to "riciness" and "fuzziness"; absence of small green leaves coming through the head. All these fine points are bred into the seed and that's why so many growers prefer our stocks.
